

CSS (PART 2)

CSS LAYOUTS AND MORE

PRESENTED BY STEVE LOURENCO

CSS (REVIEW)

- We saw the basic of CSS
- Declarations, properties, values
- Good practices

CSS LAYOUT

- There are different ways to create a layout for your webpage

	HTML Only	CSS 1	CSS 2	CSS 3
Standard				Flexbox Grid
Code	<table>	height,	display:table, float:left, clear:both, position:absolute	display:flex display:grid
1990	2000	2010		

- We can create different with help of tables, css rules, flex, grid

LIVE EXAMPLE

- We want a header explaining us which layout is it using
- A side bar with the links to the different layouts
- We have dogs pictures and cats pictures
- Description

LIVE EXAMPLE (MOCKUP)

Title of the page	Description of the current layout
	Dogs
Sidebar with Links	
	Cats
	

The background features a complex, abstract design. On the left side, there are several concentric circles in white and light gray, with numerical values ranging from 40 to 260 marked along their outer edges. These circles are partially obscured by numerous small, semi-transparent blue and white circular bokeh lights of varying sizes, creating a sense of depth and motion. The overall color palette transitions from a reddish-pink hue on the left to a deep purple and blue on the right.

THANK YOU!
